Jorge Carrera Diez

Forward Deployed Engineer. Full stack and software architecture

Computer engineer from the University of La Rioja, chartered by the Official Association of Computer Engineers of La Rioja. Over five years in the industry: currently Forward Deployed Engineer at Lumyna, and freelance engineer for the Swiss foundation that publishes the Elite Quality Index under the University of St. Gallen. Alongside that I build Snowy, a weather platform with real users that I use to work product, data and infrastructure end to end.

Career

November 2026 - Present

Forward Deployed Engineer - Lumyna

Lumyna

Building and deploying software solutions for clients and for Lumyna's own products, working with each client from the first requirement to the rollout.

- Building and deploying solutions for clients and for in-house products.
- Working with clients to understand their processes and turn them into technical requirements.
- Staying with the rollout until the client's team uses the solution.
- Maintaining, improving and documenting the solutions in production.

July 2026 - Present

Software engineer - EQx and VCr (Switzerland)

Foundation for Value Creation, through EQx

Technical handover of the digital products of the Foundation for Value Creation: the public sites of the Elite Quality Index and the Value Creation Rating. The index measures across 151 countries whether elites create value or extract it, under the academic direction of the University of St. Gallen.

- Handover from the previous developer with no interruption to the running product.
- End-to-end ownership of the user experience across both products.
- Direct contact with the index directors, designers and the people behind the rating model.
- Product-level prioritisation: deciding what ships for each client milestone.
- Remote work with an international team on an applied research project.

October 2025 - November 2026

Tech Lead - VidaCaixa

VidaCaixa, through Capgemini

Frontend technical leadership on a strategic project in the insurance sector, defining architecture, development standards, best practices and the integration of generative AI into enterprise flows.

- Frontend architecture definition and key technical decisions.
- Leading the integration of generative AI across Caixa projects.
- Agent orchestration, use-case assessment and the technical landing of AI flows.
- Code reviews, quality standards and mentoring.
- Coordination with backend, QA and business.

March 2025 - October 2025

Lead Software Engineer - Openbank

Openbank, Santander Group, through Capgemini

Built the UI of a banking operations system for branches, focused on React, scalability, maintainability and hexagonal architecture patterns.

- Building scalable banking interfaces.
- Mentoring junior engineers on React and architecture.
- Applying good practices on a large-scale financial project.

June 2023 - March 2025

Full Stack and Frontend Developer - Minsait (Indra)

Inditex, through Minsait (Indra)

Development and maintenance of Inditex's store management terminal, deployed across thousands of points of sale worldwide.

- Frontend with React and TypeScript; backend with Java and Spring Boot.
- CI/CD with GitHub Actions, testing and quality improvements.
- Scrum teams and deployments on cloud environments.

February 2022 - June 2023

Full Stack and Frontend React Developer - Hiberus Digital

React, Next.js, Node.js

Web applications in production, reusable components and projects such as the Hiberus corporate site and SivasDescalzo.

- React, Next.js, Node.js, Jest and React Testing Library.
- Components for the internal OnlyUI library.
- Weather station management system as my final degree project.

September 2021 - December 2021

Frontend Vue Developer (intern) - JIG

Wolfsburg mobility

Frontend internship with Vue, CSS, HTML, Docker and Git, building a site for transport users and an admin panel.

- Interface for bus line passengers.
- Control panel for monitoring fleet components.
- First professional contact with web product and real operations.

Education

Computer Engineering

Universidad de La Rioja

Chartered by the Colegio Profesional de Ingenieros en Informática de La Rioja

Languages

Spanish	Native
English	Professional working proficiency

Technical skills

I pick tools for performance, maintainability, SEO, cost and user experience.

Frontend
React, Next.js, TypeScript, SSR, SEO, Tailwind CSS

Backend
NestJS, Node.js, Java, Spring Boot, APIs, Auth

Data and infrastructure
MySQL, Redis, Prisma, Docker, Coolify, AWS

AI and agents
Vercel AI SDK, RAG, LLMs, MCP, Tools, Evals

Product
UX, Roadmap, Automation, Analytics, CI/CD
